

Jawline Slimming: Natural Facial Contouring

Transform your facial profile with our non-surgical jawline slimming treatment.

Create a more defined, contoured appearance without changing your natural bone structure.

What Does Jawline Slimming Mean?

Jawline slimming reshapes the lower face to create a **more narrow, contoured, and defined jawline**.

It works by softening the width caused by bulky jaw muscles.

For many people, the jawline appears wider due to **overactive masseter muscles**.

By relaxing these muscles with **Botox or similar neuromodulators**, we can reduce muscle bulk.

This treatment doesn't change bone structure—it simply relaxes overworked muscles creating a square or heavy jaw.

Why Consider This Treatment?

V-Shaped Face

Create a softer, more contoured facial silhouette with a defined chin.

Gender-Affirming

Soften a masculine jaw for a more feminine look (or vice versa).

TMJ Relief

Reduce **jaw clenching**, **grinding**, and **TMJ tension**.

Facial Harmony

Achieve balanced proportions without changing your bone structure.

The Science Behind It

Overdeveloped Muscle

The masseter is one of the strongest facial muscles. It can become bulky from chronic use.

Targeted Injection

Neuromodulators **block acetylcholine**, the neurotransmitter that signals muscle contraction.

Muscle Atrophy

Over time, the muscle shrinks from reduced activity—similar to how muscles work in exercise.

Is It Safe?

Precise Placement

Injectors target the **lower third** of the muscle only.

Expert Knowledge

Providers understand facial anatomy to avoid nearby muscles.

Correct Dosing

We use just enough to relax but not freeze natural movement.

Established Treatment

This procedure has years of safe use in cosmetic and therapeutic settings.

4-6 Weeks

3-6 Months

2-3 Sessions Per Year

Most clients maintain with regular treatments for consistent results.

What to Expect from Results

Slimmer Profile

Notice a more defined lower face, especially from **front and 45° angles**.

Softer Contour

Achieve a more feminine jawline (if desired) with natural-looking results.

Tension Relief

Experience reduced jaw pain, grinding, or headaches if you have TMJ issues.

No Downtime

Return to normal activities with minimal swelling at the injection site.

How Much is Typically Used?

30-40

Units Per Side

Standard dosage range for effective jawline slimming

60-80

Total Units

Average full treatment for both sides

2

Yearly Treatments

Typical maintenance schedule for consistent results

Dosage varies based on muscle strength, treatment history, and your specific goals.

Aftercare Instructions

First 4 Hours

Avoid lying down or massaging the area to prevent migration.

First 24 Hours

Skip exercise and heat treatments to the face area.

First 1-2 Days

Avoid chewing gum or tough foods to reduce muscle activity.

First 4-6 Weeks

Be patient as the full slimming effect gradually appears.

Possible Risks

All potential side effects are temporary and typically resolve on their own.

Choosing an experienced provider significantly reduces these already minimal risks.
